

H₂ PURE POWER LLC Hydrogen Generator

7 Plate Hydrogenator Kit - Model 1001

19 Plate Hercules Kit - Model 2002

Turn your gas guzzler into a hybrid!

Features:

- Better mileage
- Reduces Harmful Emissions
- Better Performance
- Cleaner Engine
- Easy to Install
- Easy to Maintain
- IRS Tax Credit
- Made in the USA

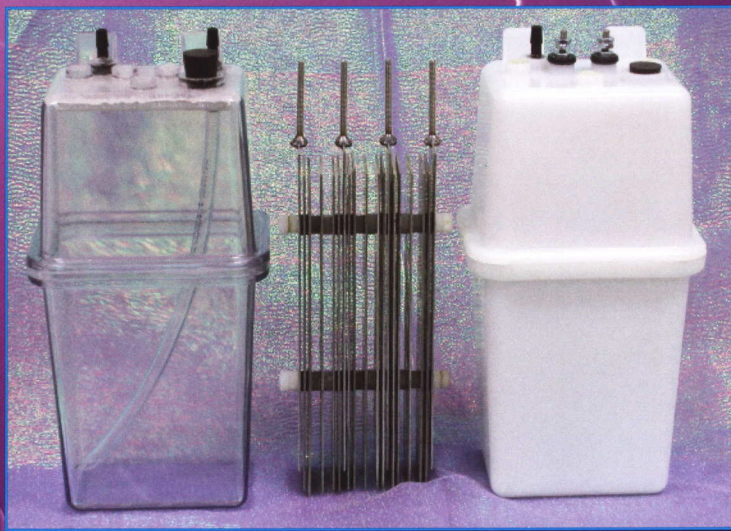

7 Plate Hydrogenator Kit

USE 7 Plate Kit FOR
Light Duty

Cars • Trucks • Runabout Boats

19 Plate Hercules Kit

USE 19 Plate Kit FOR
Heavy Duty

Semi-Trucks • Motorhomes • Farm Equipment
Construction Equipment • Large Power Boats

Installation:

Each generator comes with a detailed installation manual, which includes color-coded wiring diagrams and technical support phone numbers to provide easy installation for home and professional mechanics. H2 Pure Power also trains and certifies mechanics from all over the region – generators installed by these mechanics only will be backed by our limited warranty. A list of H2PP trained and certified mechanics can be obtained by calling our headquarters, or by visiting www.h2purepower.com

H2 Pure Power LLC Generator Kits Contain:

- One 7 plate or 19 plate generator
- One bubbler reservoir
- One keyed-on hot relay
- One toggle switch
- One ammeter
- One 1-way valve (for safety)
- Fuses and fuse-link
- Terminal connectors
- 10 and 14 gauge butt joints

What you will need in addition:

- 10 and 14 gauge wire
- Gas-line or vacuum line tubing
- Plumbers' tape (for brackets – custom brackets may need to be made)
- Simple mechanic hand tools
- Potassium hydroxide from www.thechemistrystore.com
- Distilled water

Made in USA

H₂ PURE POWER LLC Hydrogen Generator

WE ARE THE HYDROGEN PEOPLE!!!

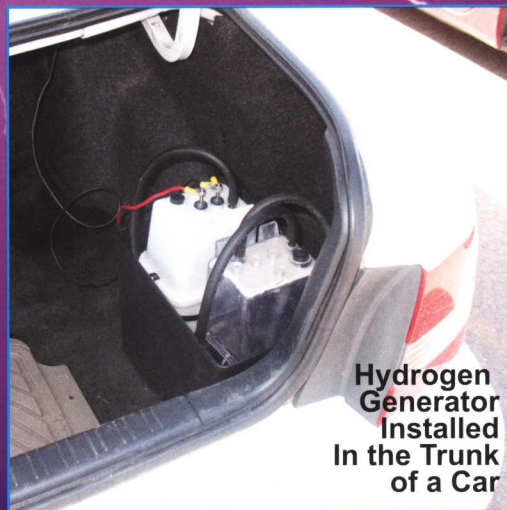

Product Application:

The H₂ Pure Power LLC Generator is a hydrogen-on-demand system to supplement diesel or gasoline powered engines of all kinds.

How does the H₂ Pure Power LLC Generator work?

The key to the success of our generators is our proprietary patent-pending nano-coated stainless steel plates. When the generator is paired with a bubbler reservoir with the addition of potassium hydroxide, it creates a combination of hydrogen and oxygen known as HHO gas. The HHO is pulled into your engine air intake through a fuel line, or clear plastic tubing, which runs from the output of the generator to the air filter case on your vehicle's engine. The use of a separate bubbler reservoir enables the generator to run 2,500 miles or more before water needs to be added, unlike other systems which need water every 200 miles. The HHO gas is mixed with equal proportions of water through a process called water electrolysis that takes place within the generator, once the water and potassium hydroxide react with the stainless steel plates and the engine is operating. The HHO meets air and fuel at the burn point, via the intake manifold, so the gas is burning in your vehicle's motor, instead of in the exhaust pipe, allowing the fuels to react completely. This greatly lowers harmful emissions- even burning the particulates, increases gas mileage and provides amplified horse-power and engine longevity.

More about our special stainless steel plates:

The stainless steel plates that make our generators so efficient are treated with a four-step process developed exclusively by our Director of Research and Development, Jerry Nezat. The iron is removed completely, and each plate is nano-coated with a secret process that increases the surface area of each plate by 20 times its' original capacity.

*****We are looking to increase
our team of certified mechanics
to include all 50 states in the US,
Canada and beyond – applications
are being accepted now!***
